10:23

**alispivak**

and the rest of the zone content can be prioritized, but won't block launch

FredB: great

anyone else have thoughts on localization?

we've got a bug for verbatim opened and put on the launch blocker list

Any other feedback/concerns on the launch??

or redesign, or process, or communications....

10:28

**stormy**

I would encourage us to continue to see if we can cut blocking bugs from the list.

This is an iterative process and we release often, so bugs will be continuously fixed after release.

10:28

**alispivak**

stormy: agreed.

ok, we can wrap up unless anyone wants to add more to the discussion

next steps:

1. review the changes to the layout to fix a number of bugs

I'll announce when it is available for review and we will discuss in the next meeting

2. Follow up on verbatim / localization of content

3. continue to look for style issues in the content / site, file bugs

4. look for ways we can remove some of the blocker bugs; if they can wait until a bit after the launch we should move them out of the blocker list

questions?

Anything missing from this list?

10:35

**stormy**

how will #4 explicitly happen?

10:36

**alispivak**

I'm going to circle back with the bug filers and discuss, also on the mdn-drivers list

to see if we can make some hard decisions 😊

10:36

**jms**

So, if I have a layout bug, should I wait for the layout changes to see if it's already been fixed?

10:36

**alispivak**

jms: go ahead and file it, so we can make sure to track it

10:37

**teoli**

jms: yes, and check if it goes well when the new layout lands, or not.

jms: make it blocking 910513 (which are bugs to be triaged)

firebot: bug 910513

10:37

**firebot**

Bug [https://bugzilla.mozilla.org/show\\_bug.cgi?id=910513](https://bugzilla.mozilla.org/show_bug.cgi?id=910513) nor, --, ---, nobody, NEW, Redesign: Proposed blockers

10:38

**alispivak**

great! thanks for joining today everyone – please feel free to carry on the discussion here or via email

10:38

**mars**

alispivak, stormy, what about issues that don't have a bug that might block the release? content? a11y audit? acceptance test suite rewrite by the web QA team?

10:38

**alispivak**

should have bugs

10:39

**stormy**

do all of the developer program things have bugs too? i.e. adding links to StackOverflow, newsletter stuff, etc?

10:39

**alispivak**

we're opening a bunch of content bugs so we can track them that way (as well as the burndown rate for content bugs)

10:39

**mars**

alispivak, cool

10:39

**alispivak**

stormy: i know that some of them do such as single sign on not sure about all of them having bugs

10:40

**mars**

I can help fill in any gaps

10:41

**stormy**

sent a mail to Robert and Mark and included you mars thanks
