

Addon Compat

13/01/2012

Premise :- Run addon tests
3 update tests.

Problem: is run could open
10 tabs & ~~so~~ cause tests
issues.

MS: Desktop has solved this with
restarts. we get single
tab

CT: People want this by 23rd.

MS: We can do Addon by adden
tests. We can get the endurance
test code to update to

JG: Do we have a list of
100

MS: AMO team has a list

AH: We have a list of 176

JG: What about Fly by installers
eg. Norton installs add adden

MS: % of users who have

AH: these are the normal speakers

CT: Let's ignore BROWSER-chrome &
update the Mozmill update test.

BM: Dont we also want to check that they are enabled.

IF it doesnt

JA: I thought we didnt want that

HS: We can see what is here & enabled when we push to brastacks

CT: How much work would that be?

HS: Tiny, its on the endurance.

BM: Blacklist items should be ignored. Cycle through

BM: Base profile with 10 then install x (eg 5). Then we know 15 dont work well needs investigate & is repeat

HS: The wrapper should handle

CT: What is 'kapow'?

JA: IF we cant update because of update addon then we push a fix with new blacklist

BM: "Kapow" ==> Browser Frozen & not usable

BM: Set m

CT: We can tell if updates

BM: What about Selenium

DB: We could but there ~~for~~ making it bullet proof could be interesting. \$

BM: We need a hybrid.

#BM: What should be on the block list? If it breaks profile how can we fix it? #

Ja: What about benign items that get activated when you start

BM: At the moment what do we care about from the top

MS: Can we get a list?

W: ~~to~~ have \$ will ~~be~~ forwarded

MS: We need a blocklist addon so we can install.

~~BM: If there are no bad addons we should~~

BM: I want something we can start iterating on. Wlach has a list

Ja: They said they would send a list from VFX4.

~~BM:~~

MS: Biggest problem is we need a proper Brassstacks, couchone crashes. On Monday I can start.

CT: ~~will~~ get am looking at what FHS will
WS: ~~I~~ I need to set up WMS. I
would like
CI: I will create a wiki page

HS: Can I have a new db to
keep clean stats.

US: Do we want this for books

BM: Sure but get en-US working
& then have a look afterwards.
